Samsung Security protects business on the go

Samsung realise the importance of keeping business data safe and secure. That's why we develop the tools that will help your customers protect theirs. With the Galaxy S10 range, security is built from the chip up to protect the phone's hardware and software from hacks, scams and cybercriminals—securing your customers wherever they choose to work.

Knox defence-grade security built from the chip up

No matter where your customers go, or what they do, they can be sure their business data stays secure with superior protection that's easy to manage.

Ultrasonic Fingerprint Scanner⁵

The newest way for your customers to keep their phone and information safe. It reads every ridge and notch of a user's finger to ensure only they can gain access.

Facial Recognition

The convenient way for your customers to access business information. A quick scan of their face and they're ready to work.

Secure Folder

An invaluable feature that allows your customers to keep their work and personal information separate and protected on a single phone.

Find My Mobile

With this feature your customers can not only find their phone, they can remotely lock its screen, back up information to the Samsung Cloud or even delete all stored phone data.

With the Galaxy S10 range, your customers can work with complete confidence wherever they are, safe in the knowledge that their business data stays secure.
